(Note1) Inductance is measured at 100 kHz

(Note2) For definitions of L₀ & L₁ please see the next page

(Note3) Saturation current (I_{sat}) is the current value that inductance (L₁) decreases to 80 % of initial value.

(Note4) Heat current (I₀) is the actual value of the current at which the temperature rise of the coil becomes 40 dc from its initial (ambient temperature) value.

The case temperature of the power choke coil is determined by the ambient temperature plus the heat generated by the operating current.
