Dual BCD counter

DESCRIPTION

The HEF4518B is a dual 4-bit internally synchronous BCD counter. The counter has an active HIGH clock input (CP<sub>0</sub>) and an active LOW clock input ( $\overline{CP}_1$ ), buffered outputs from all four bit positions (O<sub>0</sub> to O<sub>3</sub>) and an active HIGH overriding asynchronous master reset input (MR). The counter advances on either the LOW to HIGH transition of the CP<sub>0</sub> input if  $\overline{CP}_1$  is HIGH or the HIGH to

LOW transition of the  $\overline{CP}_1$  input if CP<sub>0</sub> is LOW. Either CP<sub>0</sub> or  $\overline{CP}_1$  may be used as the clock input to the counter and the other clock input may be used as a clock enable input. A HIGH on MR resets the counter (O<sub>0</sub> to O<sub>3</sub> = LOW) independent of CP<sub>0</sub>,  $\overline{CP}_1$ . Schmitt-trigger action in the clock input makes the circuit highly tolerant to slower clock rise and fall times.
