## 信昌電子陶瓷

Prosperity Dielectrics Co., Ltd.

### Sales offices

台灣營業處 Taiwan Sales Office  
總公司營業處 Sales Office-Headquarter  
32668 桃園縣楊梅市高獅路566-1號  
No.566-1, Kao-Shi Rd., Yangmei, Taoyuan  
32668, Taiwan (R.O.C.)  
Tel: +886-3-4753355  
Fax: +886-3-4854959  
E-mail: service@pdc.com.tw

新店營業處 Sales Office-SinDian  
23141 新北市新店區民權路48-3號4樓  
4F., No.48-3, Min-Cyuan Rd., Sindian,  
New Taipei City 23141, Taiwan (R.O.C.)  
Tel: +886-2-29147685  
Fax: +886-2-89116766  
E-mail: service@pdc.com.tw

大陸營業處 China Sales Office  
虎門營業處 Hu Men Office  
523928 中國廣東省東莞市虎門鎮村頭村  
背底田工業區  
Beiditian Industrial District, Cuntou, Humen,  
Dongguan, Guandong 523928, China  
Tel: +86-769-85550979  
Fax: +86-769-85550972  
E-mail: service@pdc.com.tw

### Plants

楊梅廠 (MLCC) Yang Mei Plant  
32668 桃園縣楊梅市高獅路566-1號  
No.566-1, Kao-Shi Rd., Yangmei, Taoyuan  
32668, Taiwan (R.O.C.)  
Tel: +886-3-4753355  
Fax: +886-3-4854959

桃園廠 (Chip-R, Powder) Tao Yuan Plant  
33860 桃園縣蘆竹鄉長安路一段148號  
No.148, Sec. 1, Chang-An Rd., Lujhu,  
Taoyuan 33860, Taiwan (R.O.C.)  
Tel: +886-3-3224471  
Fax: +886-3-3229671

虎門廠 (Coil) Hu Men Plant  
523928 中國廣東省東莞市虎門鎮村頭村  
背底田工業區  
Beiditian Industrial District, Cuntou, Humen,  
Dongguan, Guandong 523928, China  
Tel: +86-769-85550979  
Fax: +86-769-85550972

昆山廠 (Diode) Kun Shan Plant  
215345 中國江蘇省昆山市淀山湖鎮新華路6號  
No.6, Xin-Hua Rd., Dianshan Lake, Kunshan,  
Jiangsu 215345, China  
Tel: +86-512-57487873  
Fax: +86-512-57487973

吳江廠 (Powder) Wu Jiang Plant  
215200 中國江蘇省吳江市連東經濟開發區  
龐金路2588號  
No.2588, Pang-Jin Rd., Economic Development  
Zone, Wujiang, Jiangsu 215200, China  
Tel: +86-512-63008899  
Fax: +86-512-63009988

永州廠 (Coil) Yong Zhou Plant  
425100 中國湖南省永州市冷水灘區鳳凰園  
經濟開發區陶源路  
Tao-Yuan Rd., Fenghuangyuan Economic  
Development Zone, Lengshuitan,  
Yongzhou, Hunan 425100, China  
Tel: +86-746-8610-180  
Fax: +86-746-8610-181

永川廠 (Coil) Yong Chuan Plant  
402160 中國重慶市永川區鳳凰湖工業園區  
電子二小區B2幢左側1-2F  
B2 left 1-2F., E-2 Community, Phoenix  
Lake Industrial Park, Yongchuan,  
Chongqing 402160, China  
Tel: +86-23-49855262  
Fax: +86-23-49855290

# ABOUT PDC

## Introduction

Prosperity Dielectrics Co., Ltd. (PDC) was founded in 1990 as the 1st local manufacturer and exporter in Taiwan for ceramic dielectric powders and multiple-layer ceramic chip capacitors (MLCCs). PDC joined to Walsin Technology Corporation (WTC) as an allied company in September 2005, and incorporated Frontier to create solid synergy in 2008. Our product lines expand to SMD magnetic chips, power chokes, coils, diode and transformers.

|      |  |
|------|--|
| 歷史沿革 | 1990 台泥集團購買美大美電子公司，信昌電子陶瓷正式成立。<br>1995 信昌電子陶瓷併購台灣精密材料公司。<br>2002 信昌電子陶瓷正式上櫃。<br>2005 與華新科技(股)公司策略聯盟。<br>2007 與弘電電子工業(股)公司策略聯盟，生產二極體與磁性材料元件。<br>2008 集團推動 PSA 被動系統聯盟企業識別，信昌電子陶瓷定位為特殊品及材料事業群。  |
| 關鍵技術 | 1988 生產製造圓板電容粉末、開發。<br>1990 生產製造積層陶瓷晶片電容。<br>1995 生產陶瓷晶片電阻、陶瓷晶片電感。<br>2001 臺灣第一家自行供給晶片電容器介電瓷粉之被動元件廠商。<br>自製半導體性介電瓷粉，掌握由材料至製程的完整關鍵性技術。<br>2007 生產二極體與磁性材料元件。  |
| 品牌價值 | 2001 亞洲第一家獲得 SEMKO 安全規格認證之供應商。<br>2003 獲 ISO 9001 驗證通過。<br>2004 榮獲經濟部工業局工業精銳獎。<br>2004 獲 TS16949、ISO 14000 及 OHSAS 18000 驗證。<br>2008 獲 IECQ QC080000 HSF 驗證。<br>2007 天下雜誌 1000 大製造業排名第 705 名<br>2008 天下雜誌 1000 大製造業排名第 682 名<br>2009 天下雜誌 1000 大製造業排名第 677 名 |
| 市場表現 | 介電陶瓷粉產品佔有率世界第三。<br>國內唯一可全數提供特殊電容、電感、電阻之被動元件供應商。<br>國內唯一打入日本供應鏈之廠商。   |

信昌電子陶瓷成立於 1990 年，為國內少數能自行供給瓷粉原料並同時銷售積層陶瓷電容的被動元件廠商，更是唯一有能力由上游初發原料，向下垂直整合至被動晶片元件的廠商。2005 年信昌電陶與華新集團進行策略聯盟，2008 年正式合併弘電電子，將銷售範圍從介電瓷粉、半導體陶瓷電容器瓷片、積層陶瓷電容、晶片電阻延伸到二極體與線圈。

## Branding Performance

成為高階電子陶瓷產品的世界級廠商

Business Operation  
經營模式分析

- Vertical integration to improve competitiveness
- Building strategic alliances to strengthen competitiveness
- Expanding Western and Japanese markets, cultivating high-end products
- Moving into Chinese market to expand market share
- 垂直整合發展，擺脫同業競爭
- 運用策略聯盟，產品水平延伸
- 拓展歐美日市場，深耕高階產品
- 跨足中國市場，擴大市佔率

Branding Strategy  
品牌經營策略

- Developing specialized products market
- Enhancing brand value with continuing innovation and R&D ability
- Improving competitiveness through vertical integration
- Satisfying customer's need through extending product lines
- 深耕被動元件特殊品市場及其上游材料產業高階產品
- 持續創新研發能力，提升品牌競爭力
- 產品垂直整合，強化競爭優勢
- 產品齊全，滿足客戶一次購足

Keys to the Success  
關鍵成功因素

- The only local manufacturer with vertical production capability from ceramic dielectric powder material to multiple-layer ceramic chip capacitors
- Differentiating marketing strategy with niche product
- Diversifying product lines to expand customer base
- Continuing innovation and R&D ability
- Focusing core competence with PSA group support
- 國內唯一有能力由上游初發原料，向下垂直整合至被動晶片元件的廠商，掌握材料與製程的完整關鍵性技術
- 利基產品差異化與行銷差異化策略
- 產品線多元發展，擴大客戶群
- 持續創新與研發，開發新產品與導入新製程
- 共享集團資源，聚焦核心競爭力

Characteristics  
企業特色

- PDC is the domestic manufacturer devoting to ceramic dielectric materials.
- 為國內廠商對介電瓷粉材料研發投注最深者

### Support You Forward

由於掌握關鍵性材料的技術利基，信昌電陶可配合市場需求，由材料的研發著手，向下整合開發客戶所需要的電子元件，縮短量產時效，並積極規劃各項產品朝高附加價值的零件功能領域邁進，如：中高壓、高精度、大尺寸之晶片電容器及高功率、高精度與低阻值之晶片電阻器等高附加價值產品。未來更將結合材料核心技術，進軍高頻及高容領域。

目前信昌電陶貴金屬製程及卑金屬製程 (BME) 使用的晶片電容器介電瓷粉已陸續開發完成，量產自用與對外銷售並行展開，提升國內高階積層電容瓷粉原料自主供應比率。藉由原料往下游整合至晶片電容器成品的延伸策略，發揮上下垂直整合的高度營運績效。

近年來，為了擴展磁性元件及半導體系列產品的產能，信昌電陶陸續在中國昆山廠增置半導體相關製造設備，在東莞廠、湖南廠、重慶廠增置電感、變壓器相關製造設備，藉由產能提升，大幅拉升業績。

### 上下游垂直整合，掌握完整關鍵性技術：

- 原料 (介電瓷粉)
- 半成品 (半導體陶瓷電容瓷片)
- 成品 (晶片電容、晶片電阻、線圈、二極體)

# MLCC Select Guide

Two significant digits followed by no. of zeros. And R is in place of decimal point.

eg.:

$100=10 \times 10^0=10\text{pF}$     $106=10 \times 10^6=10\mu\text{F}$

| Rated Voltage | 6.3V |     |     | 10V     |     |     | 16V |         |     | 25V |     |         | 50V |     |     | 100V    |     |     | 200V/250V |     |     | 500V/630V |     |     | Rated Voltage |     |            |

# Multilayer Ceramic Chip Capacitors

## Introduction

The following information about PROSPERITY Multilayer Ceramic Capacitors provides all information necessary to select a particular part to fit your application.

PROSPERITY offers a versatile product line designed to meet the high standard of industrial applications.

For easy reference, this catalogue is divided into separate sections, as shown in the table of contents.

Each section has product specifications, dimensional drawings, and ordering information.

Once you have determined the proper part number for your application, you may use it for ordering, as a reference for further questions, or obtaining price information.

If modifications to standard capacitors would suit your application better, please contact a PROSPERITY representative for assistance. We'll be glad to help.

## Technology

PROSPERITY Multilayer Ceramic Capacitors are constructed by depositing alternative layers of ceramic dielectric materials and internal metallic electrodes, by using advanced ceramic manufacturing technology, and co-firing into an indestructible homogeneous body, then completed with application of metal end terminations which are fired on to assure that permanent connection of individual internal electrodes are in parallel. The terminations can also be nickel plated and then solder plated to give the chip capacitors nickel-barrier termination which have much better leaching resistance during soldering.

Reliable performances are built-in through exact formulation of dielectric powders, preparation of conductive paste, advanced automatic manufacturing, and strict quality control to assure excellent control in dielectric thickness, electrode integrity, and electrode-to-termination continuity.

## Introduction

PROSPERITY's SAFETY CERTIFIED CAPACITORS are designed for surge or lightning immunity in modem facsimile and other equipments. The capacitors of series FK are class X1/Y2 compliant respectively.

The green type capacitors in FK and FH series are manufactured by using environmentally friendly materials without lead or cadmium.

The terminations are composed of plated nickel and pure tin to feature the superior leaching resistance during soldering.

## Features

- » High reliability and stability.
- » Small size and high capacitance
- » RoHS compliant
- » Safety standard approval by EN132400:1994+A2+A3+A4, IEC60384-14, Third edition, 2005, EN60384-14:2005 and UL60950
- » Certificate number: R 50041666 and R 50118381 by TUV E231248 by UL
- » HALOGEN compliant

## Applications

- » Modem.
- » Facsimile.
- » Telephone.
- » Other electronic equipment for lighting or surge protection and isolation.

## How to order

\* FH06X102K202ECG & FH06X102K252ECG reliability is follow UL60950 standard.

\* Above 2 items is deferent with IEC60384-14. For more information, please contact with PDC local representative.

### Introduction

PDC FV Series green type capacitors are manufactured by using environmental friendly material without lead or cadmium. These capacitors feature series connection of multi-layer capacitor units in a MLCC to realize high voltage performance. This special design can distribute voltage gradients throughout the entire capacitor, so as to prevent short circuit failure. It is a safety design for LCD back-lighting inverter application.

### Features

- » Special interior design offers high voltage rating in a given case size.
- » High reliability and stability.
- » RoHS compliant

### Applications

- » DC to DC converter.
- » High voltage coupling/DC blocking.
- » Back-lighting inverters.
- » LAN/WLAN interface.
- » Modem.
- » Power supplies.

### Introduction

MA Series green type capacitors are manufactured by using green materials without lead and cadmium. These capacitors feature series connection of multi-layer capacitor units in a MLCC to realize high voltage performance. Reliable performances are built-in through exact formulation of dielectric powders, preparation of conductive paste, advanced automatic manufacturing, and strict quality control to assure excellent control in dielectric thickness, electrode integrity, and electrode-to-termination continuity.

### Features

- » Special interior design offers high voltage rating in a given case size.
- » High reliability and stability.
- » RoHS compliant.
- » HALOGEN compliant.

### Applications

- » DC to DC converter.
- » High voltage coupling/DC blocking.
- » Back-lighting inverters.
- » LAN/WLAN interface.
- » Modem.
- » Power supplies.

## Introduction

MA Series green type capacitors are manufactured by using green materials without lead and cadmium. These capacitors feature series connection of multi-layer capacitor units in a MLCC to realize high voltage performance. Reliable performances are built-in through exact formulation of dielectric powders, preparation of conductive paste, advanced automatic manufacturing, and strict quality control to assure excellent control in dielectric thickness, electrode integrity, and electrode-to-termination continuity.

## Features

- » High Voltage in a given case size.
- » High reliability and stability.
- » RoHS Compliant
- » HALOGEN compliant

## Applications

- » DC to DC converter.
- » High voltage coupling/DC blocking.
- » Back-lighting inverters.
- » Sunbbers in high frequency power convertors.

## Introduction

PROSPERITY Multilayer Ceramic Chip Capacitors supplied in bulk or tape & reel package are ideally suitable for thick-film hybrid circuits and automatic surface mounting on any printed circuit boards. All of PROSPERITY's MLCC products meet RoHS directive.

FP series use a special material between nickel-barrier and ceramic body. It provides excellent performance to against bending stress occurred during process and provide more security for PCB process.

The nickel-barrier terminations are consisted of a nickel barrier layer over the silver metallization and then finished by electroplated solder layer to ensure the terminations have good solderability. The nickel barrier layer in terminations prevents the dissolution of termination when extended immersion in molten solder at elevated solder temperature.

## Features

- » Withstanding 5mm of substrate bending.
- » High Voltage in a given case size.
- » High reliability and stability.
- » HALOGEN compliant
- » RoHS compliant

## Applications

- » DC to DC converter.
- » High voltage coupling/DC blocking.
- » Back-lighting inverters.
- » Snubbers in high frequency power convertors.

## Typical Bending Cracks of MLCC

MLCC ceramic body is consisted of rigidity material. It will be suffered compressive and tensional stress when the carried board is bended. If the suffered stress is over ceramic body strength, the bending crack is occurred.

**Therefore, the bending crack will be only occurred after soldering process.**

## Structure

PDC FP series is added a special termination material (Ultra-Buffer or Anti-Bend) between ceramic body and Ni-barrier that can absorb mechanical stress to prevent bending crack occurred.

## Illustration of Bending Test

## Comparison of Bending Test Result

## Introduction

POSPERITY open-mode series MLCC is designed by a special internal electrode pattern, which can reduce voltage concentrations by distributing voltage gradients throughout the entire capacitor. This special design also affords open-mode pattern to prevent circuit leakage when focused to failure in a board flex situation.

## Features

- » High voltage in a given case size.
- » Circuit open during product cracking.
- » High stability and reliability.
- » HALOGEN compliant.
- » RoHS compliant.

## Applications

- » High current applications.
- » Power supply and related industries
- » The other mechanical stress concerned products.

## How to order

## General electrical data

|                             |   |
|-----------------------------|---|
| Dielectric                  | X7R   |
| Size                        | 0805, 1206, 1210, 1812  |
| Capacitance*                | 100pF to 1µF  |
| Capacitance tolerance       | K ( ± 10%), M ( ± 20%)  |
| Rated voltage (WVDC)        | 100V, 200V, 250V, 500V  |
| Tan δ *                     | ≤ 2.5%  |
| Insulation resistance at Ur | ≥ 10G Ω or RxC ≥ 500 Ω -F whichever is smaller                        |
| Dielectric strength         | 100V: ≥ 2.5 x WVDC<br>200V and 250V: ≥ 2 x WVDC<br>500V: ≥ 1.5 x WVDC |
| Operating temperature       | -55 to +125°C   |
| Capacitance characteristic  | ± 15%   |
| Termination                 | Cu(or Ag)/Ni/Sn (lead-free termination)                               |

\* Measured at 25°C ambient temperature and 30~70% related humidity. Apply 1.0 ± 0.2Vrms, 1.0kHz ± 10%.

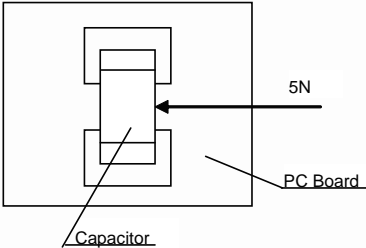

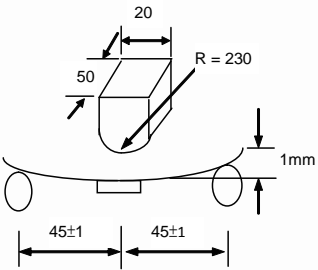

## Capacitance range

| DIELECTRIC          |               | X7R  |     |     |            |      |     |     |            |      |     |     |            |      |     |     |            |

# ULTRA-SMALL 0201 SIZE SERIES

## Introduction

MLCC consists of a conducting material and electrodes. To manufacture a chip-type SMT and achieve miniaturization, high density and high efficiency, ceramic condensers are used.

0201 MLCC is performed by high precision technology achieve high capacitance in unit size and ensure the stability and reliability of products.

## Features

- » High capacitance in unit size.
- » High precision dimensional tolerances.
- » Suitable used in high-accuracy automatic mounting machine.
- » HALOGEN compliant.
- » RoHS compliant.

## Applications

- » Miniature microwave module.
- » Portable equipments (ex. Mobile phone, PDA).
- » High frequency circuits.

## How to order

\* Measured at 30~70% related humidity.

NPO: Apply 1.0 ± 0.2Vrms, 1.0MHz ± 10% at the condition of 25°C ambient temperature.

X7R, X5R: Apply 1.0 ± 0.2Vrms, 1.0kHz ± 10% at the condition of 25°C ambient temperature.

\*\* Preconditioning for Class II MLCC: Perform a heat treatment at 150 ± 10°C for 1 hour, then leave in ambient condition for 24 ± 2 hours before measurement

## Introduction

FL Series green type capacitors are manufactured by using green materials without lead and cadmium. These capacitors feature series connection of multi-layer capacitor units in a MLCC to realize high voltage performance. Reliable performances are built-in through exact formulation of dielectric powders, preparation of conductive paste, advanced automatic manufacturing, and strict quality control to assure excellent control in dielectric thickness, electrode integrity, and electrode-to-termination continuity.

## Features

- » Low ESR and Low Tan  $\delta$
- » Excellent DC Bias
- » Provide Good Ripple Characteristic.
- » Excellent Temperature Coefficient
- » HALOGEN compliant.
- » RoHS compliant.

## Applications

- » Power supply.
- » Strobe trigger circuit for digital cameras.
- » Telecommunication (ADSL, Modem, Splitter)
- » Audio circuit
- » Lighting

## Description

MLCC consists of a conducting material and electrodes. To manufacture a chip-type SMT and achieve miniaturization, high density and high efficiency, ceramic condensers are used. PDC high capacitance MLCC offers low ESR and excellent frequency characteristics to be suited for coupling and decoupling applications in circuit. The high dielectric constant material X7R, X5R and Y5V are used for this series product.

## Features

- » Realize high capacitance in given sizes.
- » Capacitor with lead-free termination (pure Tin).
- » RoHS compliant.
- » HALOGEM compliant.

## Applications

- » Digital circuit coupling or decoupling applications.
- » For bypassing.
- » For high frequency and high-density type power suppliers.

### Introduction

POSPERITY Multilayer Ceramic Chip Capacitors supplied in bulk or tape & reel package are ideally suitable for thick-film hybrid circuits and automatic surface mounting on any printed circuit boards.

The nickel-barrier terminations are consisted of a nickel barrier layer over the silver metallization and then finished by electroplated solder layer to ensure the terminations have good solderability. The nickel barrier layer in terminations prevents the dissolution of termination when extended immersion in molten solder at elevated solder temperature.

### Features

- » A wide selection of sizes is available (0402 to 2225).
- » High capacitance in given case size.
- » Capacitor with lead-free termination (pure Tin).
- » RoHS compliant
- » HALOGEN compliant

### Applications

- » For general digital circuit.
- » For power supply bypass capacitors.
- » For consumer electronics.
- » For telecommunication.
- » DC to DC converter

\* Measured at the condition of 30~70% related humidity.

C0G(NP0): Apply 1.0 ± 0.2Vrms, 1.0MHz ± 10% for Cap ≤ 1000pF and 1.0 ± 0.2Vrms, 1.0kHz ± 10% for Cap > 1000pF, 25°C at ambient temperature

X7R: Apply 1.0 ± 0.2Vrms, 1.0kHz ± 10%, at 25°C ambient temperature.

Y5V: Apply 1.0 ± 0.2Vrms, 1.0kHz ± 10%, at 20°C ambient temperature.

## Introduction

MLCC consists of a conducting material and electrodes. To manufacture a chip-type SMT and achieve miniaturization, high density and high efficiency, ceramic condensers are used.

PDC HH series MLCC is used at high frequencies generally have a small temperature coefficient of capacitance, typical within the  $\pm 30\text{ppm}/^\circ\text{C}$  required for NP0 (COG) classification and have excellent conductivity internal electrode. Thus, PDC HH series MLCC will be with the feature of low ESR and high Q characteristics.

## Features

- » High Q and low ESR performance at high frequency.
- » Quality improvement of telephone calls for low power loss and better performance.
- » RoHS compliant.
- » HALOGEM compliant.

## Applications

- » Mobile telecommunication: Mobile phone, WLAN.
- » RF module: Power amplifier, VCO.
- » Tuners.

## How to order

## Introduction

MLCC consists of a conducting material and electrodes. To manufacture a chip-type SMT and achieve miniaturization, high density and high efficiency, ceramic condensers are used.

PDC RF series MLCC is used at high frequencies generally have a small temperature coefficient of capacitance, typical within the  $\pm 30\text{ppm}/^\circ\text{C}$  required for NP0 (C0G) classification and have excellent conductivity internal electrode. Thus, PDC RF series MLCC will be with the feature of low ESR and high Q characteristics.

## Features

- » High Q and low ESR performance at high frequency.
- » Ultra low capacitance to 0.1pF.
- » Can offer high precision tolerance to  $\pm 0.05\text{pF}$ .
- » Quality improvement of telephone calls for low power loss and better performance.
- » RoHS compliant.
- » HALOGEM compliant.

## Applications

- » Telecommunication products & equipments: Mobile phone, WLAN, Base station.
- » RF module: Power amplifier, VCO.
- » Tuners.

# CAPACITOR ARRAY

0612/ 0508 SIZE  
CAP ARRAY SERIES

## Introduction

PDC middle and high voltage series MLCC is designed by a special internal electrode pattern, which can reduce voltage concentrations by distributing voltage gradients throughout the entire capacitor. This special design also affords increased capacitance values in a given case size and voltage rating.

PDC capacitor arrays are developed to offer designers the opportunity to lower placement costs increase assembly line output through lower component count per board.

## Features

- » High density mounting due to mounting space saving.
- » Mounting cost saving.
- » Increased throughput.
- » RoHS compliant.
- » HALOGEM compliant.

## Applications

- » For use as a bypass for digital and analog signal line noise
- » Computer motherboards and peripherals.
- » The other common electronic circuits.

## How to order

\* Measured at 30~70% related humidity.

NP0: Apply 1.0 ± 0.2Vrms, 1.0MHz ± 10% at the conditions of 25°C ambient temperature.

X7R: Apply 1.0 ± 0.2Vrms, 1.0kHz ± 10%, at the conditions of 25°C ambient temperature.

Y5V: Apply 1.0 ± 0.2Vrms, 1.0kHz ± 10%, at the conditions of 20°C ambient temperature.

\*\* Preconditioning for Class II MLCC: Perform a heat treatment at 150 ± 10°C for 1 hour, then leave in ambient condition for 24 ± 2 hours before measurement.

# APPLICATION NOTES

## Storage

To prevent the damage of solderability of terminations, the following storage conditions are recommended:

Indoors under 5 ~ 40°C and 20% ~ 70% RH.

No harmful gases containing sulfuric acid, ammonia, hydrogen sulfide or chlorine.

Packaging should not be opened until the capacitors are required for use. If opened, the pack should be re-sealed as soon as is practicable. Taped product should be stored out of direct sunlight, which might promote deterioration in tape or adhesion performance. The capacitors should be used within 6 months and checked the solderability before use.

## Handling

Chip capacitors are dense, hard, brittle, and abrasive materials. They are liable to suffer mechanical damage, in the form of cracks or chips. Chip Capacitors should be handled with care to avoid contamination or damage. To use vacuum or plastic tweezers to pick up or plastic tweezers is recommended for manual placement. Tape and reeled packages are suitable for automatic pick and placement machine.

## Preheat

In order to minimize the risk of thermal shock during soldering, a carefully controlled preheat is required. The rate of preheat should not exceed 4°C per second and the final preheat temperature should be within 100°C of the soldering temperature for small chips such as 0402, 0603, 0805 and 1206, within 50°C of the soldering temperature for bigger chips such as 1210, 1808, 1812, 1825, 2211, 2220 and 2225, etc.

## Soldering

Use middy activated rosin RA and RMA fluxes do not use activated flux. The amount of solder in each solder joint should be controlled to prevent the damage of chip capacitors caused by the stress between solder, chips, and substrate.

Hand soldering with temperature-controlled iron not exceeding 30 watts and diameter of tip less than 1.2 mm is recommended, tip of iron should not contact the ceramic body directly, and the temperature of iron should be set to not more than 260°C .

For bigger chips such as 1808, 1812, 2211, 2220, 2225 etc. wave soldering and hand soldering are no recommended.

Refer IPC/JEDEC J-STD-020D Method recommended soldering profiles :

Reflow not sooner than 15 minutes and not longer than 4 hrs after removal from the temperature/humidity chamber, subject the sample to 3 cycle of the appropriate reflow conditions as defined as blow Table description.

| Profile Feature  | Pb-Free Assembly   |
|--|--|
| Preheat/Soak   |  |
| Temperature Min.(T <sub>min</sub> )  | 150°C  |
| Temperature Max.(T <sub>max</sub> )  | 200°C  |
| Time(t <sub>s</sub> ) from (T <sub>min</sub> to T <sub>max</sub> )                             | 60 to 120 seconds  |
| Ramp-up rate(TL to T <sub>p</sub> )  | 3°C /second max.   |
| Liquidous temperature(TL)  | 217°C  |
| Time(tL) maintained above TL   | 60 to 150 seconds  |
| Peak package body temperature(T <sub>p</sub> )   | For user T <sub>p</sub> must not exceed the Classification temp 260°C<br>For suppliers T <sub>p</sub> must equal or exceed the Classification temp 260°C |
| Time(T <sub>p</sub> )* within 5°C of the specified classification temperature(T <sub>c</sub> ) | 30* second   |
| Ramp-down rate (T <sub>p</sub> to TL)  | 6°C /second max.   |
| Time 25°C to peak temperature 260°C  | 8 minutes max.   |

Lead-free : Soldering temperature = 235 to 260°C , depending on product.

Maximum temperature = Minimum temperature (235°C )+ΔT+ Tolerance for oven process and measurement(5 ~ 7°C )

Time at peak temperature = 10sec, Dwell above 217°C = 90sec, Ramping rate = 3°C /sec(heating) and 6°C /sec(heating).

# APPLICATION NOTES

## Classification Reflow Profiles

| Chip Size                          | $\Delta T$         |
|------------------------------------|--------------------|
| 0402, 0603, 0805, 1206             | $25^\circ\text{C}$ |
| 1210, 1808, 1812, 2211, 2220, 2225 | $50^\circ\text{C}$ |

| Soldering | Solder Temp. ( $T_c$ )    | Soldering Time ( $t_p$ ) |
|-----------|---------------------------|--------------------------|
| Reflow    | $235 - 260^\circ\text{C}$ | $< 15 \text{ sec.}$      |
| Wave      | $230 - 260^\circ\text{C}$ | $< 5 \text{ sec.}$       |

Note :

For example ,  $T_c$  is  $260^\circ\text{C}$  and time  $t_p$  is 15sec.

for user :

The peak temperature must not exceed  $260^\circ\text{C}$  . The time above  $255^\circ\text{C}$  must not exceed 15 seconds.

## Cooling

After soldering, cool the chips and the substrate gradually to room temperature. Natural cooling in air is recommended to minimize stress in the solder joint. A cooling rate not exceeding  $4^\circ\text{C}$  per second should be used when forced cooling is necessary.

## Cleaning

All flux residues must be removed by using suitable electronic-grade vapor-cleaning solvents to eliminate contamination that could cause electrolytic surface corrosion. Good results can be obtained by using ultrasonic cleaning of the solvent. The choice of the proper system is depends upon many factors such as component mix, flux, and solder paste and assembly method. The ability of the cleaning system to remove flux residues and contamination from under the chips is very important.

## The stress v.s. position on PCB during bending

» Magnitude of stress

$$1 > 2 \approx 3 > 4 > 5$$
