

# PolySwitch Surface-mount Resettable Devices

More than ten years ago, Raychem Circuit Protection introduced the SMD product family, and polymeric PTC devices quickly became the computer industry standard for keyboard, mouse, and disk drive protection. In 1995, Raychem Circuit Protection advanced the technology, reducing the size and cost of surface-mount resettable devices with the introduction of its miniSMD product series. The recent additions to the surface-mount family include the nanoSMD series, which reduces the size to a 3216mm (1206mils) foot print, one-third the size of the popular miniSMD series.

4

## Benefits:

- Smaller size saves board space and cost
- Many product choices give engineers more design flexibility
- Compatible with high-volume electronics assembly
- Assists in meeting regulatory requirements
- Higher voltage ratings allow use in new applications

## Features:

- Broadest range of resettable devices available in the industry
- Current ratings from 0.05 to 3A
- Voltage ratings from 6V computer and electronic applications to 60V (600V Telecom)
- Agency recognition: UL, CSA, TÜV
- Small footprint
- Fast time-to-trip
- Low resistance

## Applications:

- Computer motherboards
- Modems
- USB hub, ports and peripherals
- IEEE1394 ports
- Digital cameras
- Disk drives
- CD-ROMs
- Game machines
- Battery packs
- Phones
- Fax machines
- Analog and digital line cards
- Printers
- PDAs
- Chargers

## Products in this section are grouped by:

**Product Dimensions, Product Series, Hold Current**

4

**Step 1. Determine the circuit’s operating parameters.**

Fill in the following information about the circuit:

Maximum ambient operating temperature \_\_\_\_\_

Normal operating current \_\_\_\_\_

Maximum operating voltage  
(i.e. miniSMDC014 is 60V<sub>DC</sub> max.) \_\_\_\_\_

Maximum interrupt current \_\_\_\_\_

**Step 2. Select the PolySwitch device that will accommodate the circuit’s maximum ambient temperature and normal operating current.**

Look across the top of Table S2 to find the temperature that most closely matches the circuit’s maximum operating temperature. Look down that column to find the value equal to or greater than the circuit’s normal operating current. Now look to the far left of that row to find the part number for the PolySwitch surface-mount device that will best accommodate the circuit. Devices in this section are grouped by device dimensions, so your operating-current requirement may be found in more than one grouping.

The thermal derating curves located in Figure S1 are the normalized representations of the data in Table S2.

**Step 3. Compare the selected device’s maximum electrical ratings with the circuit’s maximum operating voltage and interrupt current.**

Look down the first column of Table S3 to find the part number you selected in Step 2. Look to the right in that row to find the device’s maximum operating voltage ( $V_{MAX}$ ) and maximum interrupt current ( $I_{MAX}$ ). Ensure that  $V_{MAX}$  and  $I_{MAX}$  are greater than or equal to the circuit’s maximum operating voltage and maximum interrupt current.

**Step 4. Determine time-to-trip.**

Time-to-trip is the amount of time it takes for a device to switch to a high-resistance state once a fault current has been applied across the device. Identifying the PolySwitch device's time-to-trip is important in order to provide the desired protection capabilities. If the device you choose trips too fast, undesired or nuisance tripping will occur. If the device trips too slowly, the components being protected may be damaged before the device switches to a high-resistance state.

Figures S11-S19 show the typical time-to-trip at 20°C for each of the PolySwitch devices.

If the PolySwitch device's time-to-trip is too fast or too slow for the circuit, go back to Step 2 and choose an alternate device.

**Step 5. Verify ambient operating conditions.**

Ensure that your application's minimum and maximum ambient temperatures are within the operating temperature of -40°C to 85°C (-40°C to 125°C for SMDH160).

**Step 6. Verify the PolySwitch device dimensions.**

Using dimensions in Table S4, compare the dimensions of the PolySwitch device you selected with the application's space considerations.

## Protection Application Selection Table for Surface-mount Devices

The table below lists Polyswitch devices typically used in these applications.

Specifications for the suggested device part numbers can be found in this section.

Once a part has been selected, the user should evaluate and test each product for the intended application.

PolySwitch Resettable Devices—Key Selection Criteria					
Protection Application	Additional Comments	Overcurrent Overvoltage	Small Size	Low Resistance	Fast Time-to-trip (Temperature Protection)
AC adapter input power	use w/ Zener & triac		SMD250	SMD250	SMD200

**Table S5. Physical Characteristics and Environmental Specifications for Surface-mount Devices  
Operating temperature range -40°C to 85°C, -40°C to 125°C for SMDH160****Physical Characteristics**

Terminal pad material	Solder-plated copper for nanoSMDC, microSMD, and miniSMDC series Gold plating for nanoSMDM, and miniSMDM series 100% tin for SMD series
Soldering characteristics	ANSI/J-STD-002B Category 3 for nanoSMDC, nanoSMDM, microSMD, miniSMDC, and miniSMDM series ANSI/J-STD-002B Category 1 for SMD series
Solder heat withstand	per IEC-STD 68-2-20, Test Tb, Section 5, Method 1A
Flammability resistance	per IEC 695-2-2 Needle Flame Test for 20 sec.
Recommended storage conditions	40°C max, 70% R.H. max; devices may not meet specified ratings if storage conditions are exceeded.

**Environmental Specifications**

Test	Test Method	Conditions	Resistance Change
Passive aging	Raychem PS300, Section 5.3.2	60°C, 1000 hours	±3% typical
		85°C, 1000 hours	±5% typical
Humidity aging	Raychem PS300, Section 5.3.1	85°C, 85% RH, 100 hours	±1.2% typical
Thermal shock	MIL-STD-202, Method 107G	85°C, -40°C (20 times)	-33% typical
		125°C, -55°C (10 times)	-33% typical
Vibration	MIL-STD-883C	per MIL-STD-883C	No change
Solvent resistance	Raychem PS300, Section 5.2.2	Freon	No change
		Trichloroethane	No change
		Hydrocarbons	No change

**Agency Recognition for Surface-mount Devices\***

UL	File # E74889 for all surface-mount devices
CSA	File # CA78165 for SMD/miniSMDC/miniSMDM/microSMD/nanoSMDC/nanoSMDM series
TÜV	Certificate # R9872048 for microSMD/miniSMDC/miniSMDM series
	Certificate # R2172061 for nanoSMDM/nanoSMDC series
	Certificate # R9872049 for SMD series

\*Refer to Telecom and Networking section for agency recognition on Telecom and Networking Surface Mount Devices.

**Table S6-A. Packaging and Marking Information for Surface-mount Devices**

Part Number	Tape & Reel Quantity	Standard Package	Part Marking	Recommended Pad Layout Figures [mm (In.)]			Agency Recognition
				Dimension A (Nom.)	Dimension B (Nom.)	Dimension C (Nom.)	
<b>nanoSMDC Series</b>							
<b>Size 3216 mm/1206 mils</b>							
nanoSMDC150	3,000	15,000	<b>J</b>	1.60 (0.063)	1.00 (0.039)	2.00 (0.079)	UL, CSA, TÜV
Lead-free devices are listed in Table S6-B							
<b>nanoSMDM Series</b>							
<b>Size 3216 mm/1206 mils</b>

## Part Numbering System

## Solder Reflow and Rework Recommendations for Surface-mount Devices

### Solder Reflow

- Recommended reflow methods: IR, Vapor phase, and hot air oven.
- The following product series are not designed to be wave soldered to circuit boards:
  - nanoSMDM
  - miniSMDM
  - midSMD
  - SMD
  - SMD2
  - TS
- The following product series are designed to be wave soldered to circuit boards:
  - nanoSMDC
  - microSMD
  - miniSMDC, miniSMDE
- Recommended maximum paste thickness for the microSMD, miniSMDC, and miniSMDE devices is 0.25 mm (10mils), 0.13-0.25 mm for miniSMDM and nanoSMDM, and 0.38 mm for SMD.
- Devices can be cleaned using standard methods and solvents.

Figure S21

### Caution:

- If reflow temperatures exceed the recommended profile, devices may not meet the performance specifications.

### Rework

- Use standard industry practices for the nanoSMDC, nanoSMDM, microSMD, miniSMDC, miniSMDM, and miniSMDE devices.
- For SMD and midSMD series and all TS devices rework should be confined to removal of the installed product and replacement with a fresh device.

**Latest Information**

- Please visit us at [www.circuitprotection.com](http://www.circuitprotection.com) or contact your local representative for the latest information.
- The information in this data package contains some preliminary information. Raychem Circuit Protection, a division of Tyco Electronics, reserves the right to change any of the specifications without notice. In addition, Tyco Electronics reserves the right to make changes—without notification to Buyer—to materials or processing that do not affect compliance with any applicable specification.

**WARNING:**

- Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- The devices are intended for protection against occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- Contamination of the PPTC material with certain silicon based oils or some aggressive solvents can adversely impact the performance of the devices.
- Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, and mechanical procedures for electronic components.
- Operation in circuits with a large inductance can generate a circuit voltage ( $L \frac{di}{dt}$ ) above the rated voltage of the PolySwitch resettable device.
